

CRYPTO PROJECT RESEARCH REPORT

BICONOMY
(\$BICO)

Deep-Dive Analysis · August 2026 · NBZ / NASIR

\$25.23M	\$21.87	70M+	#542	1.00B
Market Cap	All-Time High	Transactions	CMC Rank	Max Supply

A comprehensive, independently researched analysis of Biconomy (\$BICO) covering Team, Technology, Tokenomics, Market Overview, Use Cases, Competitors, Recent News & Investment Risk Assessment — sourced from verified and up-to-date public data.

Research by NBZ / NASIR

01 · PROJECT OVERVIEW

FIELD	DETAIL
Project Name	Biconomy
Token Ticker	\$BICO
Blockchain Layer	Multi-chain middleware — EVM-compatible (Ethereum L1 + 20+ L2s / sidechains)
Built On	Ethereum ecosystem · Deployed on Polygon, Arbitrum, Optimism, Base, BNB Chain, and 20+ EVM mainnets
Protocol Type	Account abstraction infrastructure — full-stack Web3 UX layer (SDK + API + Smart Accounts)
Founded	2019 — by Ahmed Al-Balaghi, Aniket Jindal, and Sachin Tomar
Headquarters	Global — registered in Cayman Islands; team distributed internationally
TGE	October 2021 — IDO on Huobi Prime + simultaneous exchange listings
Website	biconomy.io · docs.biconomy.io
GitHub	github.com/bcnmy — active open-source repository; Nexus audited by 4 firms
Core Products	Nexus Smart Account (ERC-7579) · MEE (Modular Execution Environment) · Supertransaction API · AbstractJS SDK
Transactions	70M+ transactions processed since launch
Smart Accounts	4.5M+ Nexus smart accounts deployed across supported chains
Max Supply	1,000,000,000 BICO (1 Billion — fixed hard cap)
Circulating Supply	1,000,000,000 BICO (~100% in circulation — August 2026)
Key Milestone	April 2026: ERC-8211 AI Agent standard co-developed with Ethereum Foundation
Audit Status	Nexus audited by CodeHawks-Cyfrin (Sep 2024), Spearbit (Oct/Nov 2024), Zenith (Mar 2025), Pashov (Mar 2025)

Biconomy is a full-stack account abstraction infrastructure provider that enables Web3 applications to deliver Web2-level user experiences. Founded in 2019 and launched publicly in 2021, Biconomy addresses the most persistent barrier to mainstream blockchain adoption: the complexity of managing gas fees, seed phrases, multi-chain bridging, and sequential transaction signing that makes Web3 products genuinely difficult for ordinary users.

The protocol's core innovation is the Modular Execution Environment (MEE) — an execution layer that goes beyond ERC-4337 to enable true cross-chain composability. Where ERC-4337 enables smart accounts on a single chain, MEE allows users to sign once and execute complex multi-step, multi-chain operations automatically. Gas is paid from any chain, bridging is handled invisibly, and execution ordering is managed by the protocol — all invisible to the end user.

The April 2026 co-development of ERC-8211 with the Ethereum Foundation — a new execution standard specifically designed for on-chain AI agents — positions Biconomy at the intersection of the two most powerful narratives in crypto: account abstraction and autonomous AI agents. With 70M+ transactions processed and 4.5M+ smart accounts deployed, Biconomy has demonstrated genuine protocol-level traction beyond whitepaper promises.

02 · TEAM & FOUNDERS

NAME	ROLE	BACKGROUND
Ahmed Al-Balaghi	Co-Founder & CEO	Visionary CEO and public face of Biconomy. Drives overall strategy, business development, and investor relations. Active public speaker at Ethereum conferences and Web3 events globally. Leads the Ethereum Foundation partnership discussions.
Aniket Jindal	Co-Founder & COO	Co-founder overseeing operations, partnerships, and go-to-market strategy. Previously in blockchain infrastructure roles. Manages day-to-day operational execution and strategic partnership development across DeFi and gaming sectors.
Sachin Tomar	Co-Founder & CTO	Chief Technology Officer and principal technical architect. Leads protocol design including the MEE architecture, Nexus smart account, and Supertransaction API. Deep Ethereum/EVM expertise; drives all engineering direction.
Mislav Javor	VP of Product	Leads product strategy and user experience design across Biconomy's developer-facing tools. Oversees the AbstractJS SDK, dashboard, and documentation quality that determines developer adoption velocity.
Filip Dujmusic	Head of Engineering	Leads engineering execution; manages the team building and maintaining Nexus, MEE, Bundler, and Paymaster infrastructure across 20+ EVM chains.
Ivan Piton	Head of Business Dev.	Drives partnership acquisition and ecosystem expansion. Manages relationships with protocols, wallets, and enterprises integrating Biconomy's infrastructure.

Biconomy's three co-founders bring complementary skills that cover the critical axes of a developer infrastructure company: CEO Al-Balaghi handles vision and external relationships, COO Jindal manages operations and partnerships, and CTO Tomar architects the technical stack. This division of responsibility mirrors successful enterprise software companies more than typical crypto projects — reflecting Biconomy's positioning as a B2B infrastructure provider rather than a consumer-facing DeFi protocol.

Stani Kulechov — founder of Aave, one of the largest DeFi protocols in the world — invested in Biconomy as an individual angel. His backing is particularly significant: Aave is one of the primary DeFi protocols that benefits from seamless account abstraction infrastructure, and Kulechov's personal investment signals that the most sophisticated DeFi builders see Biconomy's infrastructure as foundational to the next generation of user-friendly DeFi applications.

03 · TECHNOLOGY & ARCHITECTURE

COMPONENT	DESCRIPTION
Protocol Layer	Multi-chain middleware — not a blockchain; infrastructure layer above Ethereum and 20+ EVM chains
Supported Chains	Ethereum L1 · Polygon · Arbitrum · Optimism · Base · BNB Chain · Plasma · Unichain · 20+ EVM mainnets
Nexus Smart Account	ERC-7579 compliant modular smart account — 25% more gas-efficient than alternatives; pre-deployed on 20+ chains
ERC-4337 Compliance	Full ERC-4337 support (UserOperations, Bundlers, Paymasters) — plus EIP-7702 for EOA set-code delegation
MEE (Modular Exec. Env.)	Execution layer beyond ERC-4337 — enables cross-chain composability, dynamic batching, and supertransactions
Supertransaction API	REST API: POST /v1/quote → POST /v1/execute — any language, no blockchain expertise required
AbstractJS SDK	TypeScript SDK with Viem-inspired API — full type safety, direct smart account management
Gasless Transactions	Users pay gas in USDC, USDT, or any ERC-20 — OR developers sponsor gas entirely via Paymaster
Composable Batching	Chain multiple operations atomically; each step uses outputs from the previous across chains
Cross-Chain Orchestration	Single user signature executes operations across multiple chains — bridge/swap routing automatic
Smart Sessions	Delegated execution: users grant scoped AI agent/bot permissions with precise spend limits and contract access
ERC-8211 (AI Agents)	April 2026: co-developed with Ethereum Foundation — new standard for on-chain AI agent smart batching
Account Modes	smart-account (Nexus/ERC-4337) · eoa (MetaMask, Rabby, Trust) · eoa-7702 (EIP-7702 delegation)
Paymaster Service	Full sponsorship (developer pays) or pay-in-tokens (user pays in ERC-20) — per-project limits in dashboard
Open Source Bundler	ERC-4337 TypeScript bundler — implements eth_sendUserOperation across EntryPoint v0.6.0 and v0.7.0
Audit Record	Nexus audited by CodeHawks-Cyfrin (Sep 2024), Spearbit (Oct/Nov 2024), Zenith (Mar 2025), Pashov (Mar 2025)
Conditional Execution	Schedule transactions or trigger on-chain conditions (e.g. price oracle thresholds) automatically
200+ DeFi Vault Integ.	intent-vault instruction type: pre-built integrations for 200+ DeFi protocols, auto-optimised routing

Biconomy's technical architecture is built around the insight that ERC-4337 — while transformative — only solves account abstraction on a single chain. In 2026's multi-chain reality, users must still manually bridge assets, manage gas on each chain separately, and sign multiple transactions for complex DeFi workflows. The Modular Execution Environment (MEE) eliminates all of this: one signature executes everything, across any chain, with gas handled automatically from wherever the user holds assets.

Nexus — Biconomy's ERC-7579 modular smart account — is the consumer-facing component of this stack. Pre-deployed on 20+ EVM mainnets and 25% more gas-efficient than competing smart accounts, Nexus supports four ERC-7579 module types: validator, executor, hook, and fallback. This modular design allows developers to install spending limit modules, social recovery modules, session key modules, and custom logic without redeploying the core account — the same principle that made iPhone's App Store transformative for smartphones applied to crypto wallets.

The April 2026 ERC-8211 co-development with the Ethereum Foundation represents Biconomy's most significant technical milestone since MEE. The standard enables 'smart batching' for on-chain AI agents — allowing autonomous AI programs to execute dynamic, multi-step DeFi strategies (rebalancing, yield optimisation, risk management) within user-defined permission boundaries. As AI agents increasingly interact with DeFi, the execution infrastructure they use

will be as important as the AI models themselves, and Biconomy is positioning to be that infrastructure.

04 · USE CASES & REAL-WORLD APPLICATIONS

USE CASE	DESCRIPTION	STATUS
Gasless dApp Transactions	Developer sponsors gas — users interact with no ETH required; no wallet top-up friction	Live — core product
Pay Gas in Any ERC-20	Users pay gas in USDC, USDT, or any supported token — no native chain token needed	Live
Cross-Chain Supertransactions	Sign once, execute across multiple chains — bridge + swap + DeFi interaction in one signature	Live — MEE
Composable Transaction Batching	Batch multiple operations atomically; each step uses previous output — no partial execution risk	Live
DeFi Zaps (One-Click)	One-click DeFi workflows: enter/exit vaults, rebalance portfolios, compound yields automatically	Live — 200+ vaults
Smart Sessions (AI Agents)	Grant AI agents scoped permissions to rebalance, trade, or yield-farm within defined limits	Live
ERC-8211 AI Agent Batching	Co-developed with Ethereum Foundation: smart batching standard for autonomous on-chain AI agents	Live — Apr 2026
Social Recovery	Recover smart account access via trusted contacts — no seed phrase required	Live — Nexus module
Spending Limits	Set daily/per-tx spend caps on smart accounts — programmable security policies	Live — Nexus module
Session Keys	Grant time-limited signing authority to sub-keys — uninterrupted gaming/trading sessions	Live — Nexus module
EOA Upgrade (EIP-7702)	MetaMask, Rabby, Trust Wallet users get smart account features without migrating wallet	Live — eoa-7702 mode
Conditional Execution	Schedule transactions or trigger on price oracle conditions — automated DeFi management	Live
Cross-Chain Swap Integration	200+ pre-built DeFi vault integrations — auto-optimised routing across protocols and chains	Live
Gaming Transaction UX	Session keys enable seamless in-game transactions without interrupting gameplay for signatures	Live — GameFi

Biconomy's use case model addresses the most fundamental user experience failures in Web3 adoption. The requirement to hold native gas tokens on every chain is arguably the single biggest barrier to casual user adoption — nobody using a Web2 app must understand how HTTP fees work before clicking a button. Biconomy's Paymaster service applies the same principle: the user clicks, the developer or protocol handles the complexity invisibly.

The Smart Sessions feature for AI agents is Biconomy's most forward-looking product. As autonomous AI agents proliferate in 2025-2026, the question of how they interact with on-chain financial systems becomes critical. Smart Sessions allows users to grant an AI agent permission to manage their AAVE position, rebalance a portfolio, or compound yields — with precise constraints on which contracts it can access, which tokens it can move, and maximum spend limits — all without requiring the user to sign each individual transaction.

05 · COMMUNITY & ECOSYSTEM

METRIC	DATA
Transactions Processed	70M+ total since launch — verified on-chain usage across all supported chains
Smart Accounts Deployed	4.5M+ Nexus smart accounts live across 20+ EVM mainnets
Supported Chains	20+ EVM mainnets including Ethereum, Polygon, Arbitrum, Optimism, Base, BNB Chain, Plasma, Unichain
GitHub (bcnmy)	Active open-source repository — Nexus, MEE, Bundler, Paymaster, AbstractJS SDK all public
Developer Tools	Supertransaction API (REST) · AbstractJS SDK (TypeScript) · Biconomy Dashboard · Docs
Audit Partners	CodeHawks-Cyfrin · Spearbit · Zenith · Pashov — 4 independent audits of Nexus contracts
ERC-8211 Co-Development	April 2026: Ethereum Foundation co-authored ERC-8211 AI agent batching standard with Biconomy
X (Twitter)	Active @biconomy account — developer updates, ecosystem announcements, ERC-8211 coverage
Supported Wallets	MetaMask · Binance Web3 · Trust Wallet · Rabby · Ledger · Backpack · Phantom
Exchange Listings	Binance · Coinbase · HTX · KuCoin · OKX · Bybit · MEXC · Gate.io
DeFi Integrations	200+ DeFi vault integrations via intent-vault instruction type in Supertransaction API
Notable Partner	Stani Kulechov (Aave founder) — personal investor; alignment between AAVE and Biconomy infrastructure
2025 Chain Expansion	Plasma and Unichain integrations completed in 2025 — ongoing multi-chain expansion strategy

Biconomy's community is primarily a developer ecosystem rather than a retail token community. The 70M+ transactions and 4.5M+ smart accounts represent real developer adoption — protocols and dApps that have integrated Biconomy's infrastructure to serve their own users. This B2B adoption pattern creates stickier network effects than consumer token communities: once a dApp integrates Nexus or MEE, migrating to a competitor requires significant engineering effort.

The Ethereum Foundation partnership on ERC-8211 is the most significant community and ecosystem milestone in Biconomy's recent history. Being chosen as a co-author of an Ethereum Improvement Proposal by the Ethereum Foundation places Biconomy alongside the most credible technical contributors in the Ethereum ecosystem. This is not a marketing partnership — it is technical collaboration at the standard-setting level, which has real implications for Biconomy's position as AI agent infrastructure becomes economically significant.

06 · INVESTORS & PARTNERSHIPS

ROUND	DATE	AMOUNT	INVESTORS
Pre-seed	2019	Undisclosed	Early angel investors; team bootstrapped initially
Seed	2020	Undisclosed	Fenbushi Capital · Woodstock Fund · early VCs
Series A / IDO	Oct 2021	Undisclosed	YZi Labs (Binance Labs) · Coinbase Ventures · Stani Kulechov · CoinFund · Mechanism Capital · Zee Prime · Outlier Ventures · DACM · Genblock

INVESTOR	TYPE	SIGNIFICANCE
YZi Labs (prev. Binance Labs)	Tier 1	Incubator/Venture — Binance ecosystem fund. Tier 1 institutional credibility; Binance exchange listing alignment.
Coinbase Ventures	Tier 2	Venture — Coinbase's investment arm. Strategic alignment with Base L2 and Coinbase's account abstraction ambitions. Coinbase lists BICO.
Stani Kulechov	Angel	Aave founder — personal investment from DeFi's most respected protocol founder. Validates Biconomy's infrastructure thesis.
Fenbushi Capital	Tier 2	Venture — one of Asia's most active and respected blockchain VCs; Ethereum-focused portfolio.
Mechanism Capital	Tier 3	Venture — DeFi-focused crypto fund with strong track record.
CoinFund	Tier 3	Venture — early-stage crypto fund; strong Web3 infrastructure thesis.
Zee Prime Capital	Tier 3	Venture — European crypto fund focused on DeFi and infrastructure.
Outlier Ventures	Tier 3	Incubator/Venture — Web3 accelerator and fund with broad DeFi and infrastructure portfolio.
Digital Asset Capital Mgmt.	Tier 3	Venture — institutional digital asset manager.
Woodstock Fund	Tier 4	Venture — India-based blockchain fund; early infrastructure thesis.
Genblock Capital	Tier 4	Venture — crypto-native early-stage fund.
Ethereum Foundation	Partner	Co-developed ERC-8211 AI agent standard (Apr 2026) — technical partnership, not financial investor.

Biconomy's investor roster is exceptionally well-constructed for a developer infrastructure play. YZi Labs (Binance Labs) provides Binance ecosystem access and exchange listing support. Coinbase Ventures creates natural alignment with the Base L2 ecosystem — where Biconomy's MEE infrastructure is particularly valuable for cross-chain composability with Ethereum. Stani Kulechov's personal investment from the most respected DeFi founder in the space is the highest-quality signal of product-market fit a developer infrastructure protocol can receive.

07 · TOKENOMICS

PARAMETER	DETAIL
Token Symbol	BICO
Token Standard	ERC-20 — Ethereum L1 (primary) · bridgeable to supported chains
Total / Max Supply	1,000,000,000 BICO (1 Billion — fixed hard cap)
Circulating Supply	1,000,000,000 BICO (~100% in circulation — August 2026)
TGE	October 2021 — IDO on Huobi Prime + simultaneous exchange listings
Token Utility	Staking (become relayer operator) · Governance (on-chain voting) · Fee discounts for dApps holding BICO
Staking Yield	8–15% APR (2025) — stake BICO to operate relayers; earn share of gas fees collected
Governance	BICO holders vote on fee structures, supported chains, relayer incentives, and protocol upgrades
Fee Discount	dApps holding or staking BICO receive discounted transaction fees on the Biconomy network
Vesting Status	Vesting schedules for team/investors extended through 2027 per early documentation

ALLOCATION	%	TOKENS	NOTES
Community	37.91%	379.1M	Ecosystem incentives, liquidity mining, developer grants, community programmes
Team & Advisors	22.00%	220M	Core team and advisors — subject to vesting schedule through 2027
Private Round	12.00%	120M	Private sale investors — vesting applies
Foundation	10.00%	100M	Biconomy Foundation treasury — ecosystem development and operations
Seed	6.38%	63.8M	Seed round investors — vesting schedule
Pre-seed	5.99%	59.9M	Early investors and angels including Stani Kulechov — vesting
Main Sale Option 1	4.00%	40M	Public sale participants — first tranche
Main Sale Option 2	1.00%	10M	Public sale participants — second tranche
Strategic Round	0.50%	5M	Strategic partners and ecosystem collaborators
Public Sale (Huobi Prime)	0.20%	2M	IDO on Huobi Prime at TGE — October 2021
TOTAL	100%	1B BICO	Hard cap — no additional BICO can be minted

BICO's tokenomics are structured around community alignment as the largest single allocation (37.91%), with the combined investor allocations (pre-seed 5.99% + seed 6.38% + private round 12%) totalling approximately 24.37% — a reasonable VC share for a well-funded infrastructure protocol. With ~100% of supply now circulating and vesting schedules extending through 2027, the primary risk is not a future unlock event but rather the ongoing market impact of already-circulating team and investor tokens that have fully vested.

The staking mechanism creates genuine token utility beyond speculation: BICO holders can become relayer operators and earn 8-15% APR from gas fees processed through the network. This creates a yield-bearing use case that anchors BICO demand to actual protocol usage — higher transaction volume means more gas fee revenue, which means higher staking yields, which means more demand for BICO to stake.

08 · MARKET OVERVIEW

\$25.23M	\$25.23M	\$37.49M	\$21.87	▼99.9%
Market Cap	FDV	24h Volume	ATH	Below ATH

METRIC	DATA
Token Symbol	BICO
24h Price Range	\$0.01994 – \$0.02516 (August 2026)
Market Cap	\$25.23M (August 2026 — CoinMarketCap)
Unlocked Market Cap	\$25.23M (equal to market cap — ~100% circulating)
Fully Diluted Val.	\$25.23M (market cap = FDV; near 100% circulating)
24h Trading Volume	\$37.49M (August 2026) — notable: volume exceeds market cap by ~49%!
Volume-to-Market-Cap	~149% — exceptionally high ratio indicating significant speculative activity
All-Time High	\$21.87 (CoinMarketCap)
All-Time Low	\$0.01125 (near current price — recent ATL territory)
Current vs ATH	~99.9% below all-time high
Circulating Supply	1.00B BICO (~100% of 1B max)
CMC Rank	#542 (August 2026)
Performance (24h/7d)	▲+11.96% (24h) · ▼48.22% (7d)
Performance (30d/90d)	▲+78.83% (30d) · ▲+8.14% (90d)
YTD Performance	▼41.69% (year-to-date August 2026)
Exchange Listings	Binance · Coinbase · HTX · KuCoin · OKX · Bybit · MEXC · Gate.io

BICO's market data tells a complex and somewhat contradictory story. The token is 99.9% below its ATH of \$21.87 — one of the deepest corrections in this research series — yet the 30-day performance of +78.83% suggests a significant recovery is underway. The most striking data point is the 24h volume of \$37.49M against a market cap of only \$25.23M — a volume-to-market-cap ratio of approximately 149%, which is extraordinarily high and suggests intense speculative trading activity at a time when the token may be near its all-time low.

The combination of ATL-vicinity pricing with 149% volume-to-market-cap ratio and +78.83% 30-day performance creates a technical picture consistent with a relief rally from extreme lows. Whether this represents sustainable recovery driven by the ERC-8211 AI agent narrative and genuine protocol traction, or a speculative dead-cat bounce, is the key investment question that only time and sustained adoption metrics can resolve.

09 · COMPETITORS & MARKET POSITION

PROJECT	TYPE / CHAIN	MKT CAP	VS \$BICO
Alchemy	Web3 Dev Platform / Multi-chain	Private	Largest developer platform; centralised; no token. Biconomy offers decentralised open-source alternative with token-aligned incentives.
Gelato Network (GEL)	Automation / Multi-chain EVM	\$30M+	Web3 automation and relayer network; comparable infrastructure layer; direct competitor for gas abstraction and automation use cases.
Pimlico	ERC-4337 Infra / Multi-chain	Private	Specialised ERC-4337 bundler and paymaster; well-regarded by developers; no public token; competes directly for smart account infrastructure.
Stackup	ERC-4337 Infrastructure	Private	ERC-4337 bundler service; no public token; developer-focused; competes for the same smart account market.
Safe (Gnosis Safe)	Smart Account / Ethereum	\$100M+	Pioneer multi-sig smart account; different use case (institutional multi-sig vs consumer AA); complementary more than competitive.
ZeroDev	Smart Account / Multi-chain	Private	ERC-4337 smart account provider; kernel smart account; developer-focused; no public token; direct product competitor.
Particle Network	Account Abstraction / Multi-chain	\$50M+	Universal account abstraction network; competing directly in the AA infrastructure space with similar cross-chain vision.
Coinbase Smart Wallet	Smart Account / Base L2	N/A (CB)	Coinbase's own smart wallet on Base; free for users; potential competitor on Base specifically; but Biconomy is chain-agnostic.
BICONOMY (BICO)	AA Infrastructure / Multi-chain	\$25M	Full-stack AA · MEE cross-chain · ERC-8211 co-author · 70M+ txns · 4.5M+ smart accounts · Coinbase Ventures + Binance Labs

Biconomy operates in a competitive but still early-stage account abstraction infrastructure market. The most significant competitive challenge is not from tokenised competitors but from well-funded private companies: Alchemy, Pimlico, Stackup, and ZeroDev are all building similar ERC-4337 infrastructure without public tokens, meaning they compete for developer mindshare without the price volatility and perception issues of a public token.

Biconomy's competitive advantages are its full-stack breadth (gasless + cross-chain MEE + smart accounts in one protocol), its ERC-8211 Ethereum Foundation co-authorship positioning it as a standards-setter, and its 70M+ transaction track record providing enterprise-grade reliability evidence. The \$25M market cap against this fundamentally strong positioning creates an asymmetric risk/reward profile if the AI agent narrative drives developer adoption of ERC-8211.

10 · RECENT NEWS & UPDATES (2019–2026)

DATE	EVENT
Aug 2026	BICO trading at \$0.020–\$0.025; market cap \$25.23M; CMC #542. 24h volume of \$37.49M exceeds market cap by 49% — intense speculative activity. +78.83% over 30 days from near-ATL levels.
Apr 2026	MAJOR: Biconomy and Ethereum Foundation co-develop ERC-8211 — new execution standard for on-chain AI agents enabling smart batching of dynamic multi-step DeFi strategies. Positions BICO at AI x blockchain intersection.
2025–2026	MEE integrations completed on Plasma and Unichain — ongoing multi-chain expansion strategy; Biconomy declared universal interface for all EVM blockchains.
Mar 2025	Nexus smart account audited by Zenith and Pashov — fourth round of independent security audits. Smart contract security record remains clean with no significant exploits.
Oct–Nov 2024	Nexus audited by Spearbit — one of DeFi's most prestigious smart contract auditing firms. Audit report published publicly.
Sep 2024	Nexus smart account audited by CodeHawks-Cyfrin — first of four planned independent security audits ahead of broad deployment.
2024	Nexus (ERC-7579 modular smart account) released — 25% more gas-efficient than competing smart accounts. Pre-deployed across 20+ EVM mainnets. AbstractJS SDK released (Viem-inspired TypeScript SDK).
2024	Smart Sessions feature launched — enables AI agents and bots to operate within user-defined permission boundaries without requiring individual transaction signatures.
2023–2024	Supertransaction API launched — REST API exposing MEE for rapid developer integration. 200+ DeFi vault integrations added via intent-vault instruction type.
2022–2023	MEE (Modular Execution Environment) architecture developed and deployed — extends ERC-4337 with cross-chain composability. Biconomy processes 70M+ total transactions milestone.
Oct 2021	TGE: BICO IDO on Huobi Prime. Simultaneous listings on Binance, Coinbase, OKX. BICO hits all-time high of \$21.87 during initial trading sessions.
2021	YZi Labs (Binance Labs), Coinbase Ventures, Stani Kulechov (Aave), CoinFund, Mechanism Capital and others invest. 4.5M+ smart accounts deployed milestone.
2019–2020	Biconomy founded in 2019. Early gasless transaction relayer infrastructure deployed. First dApp integrations completed. Seed funding from Fenbushi Capital, Woodstock Fund.

Biconomy's news timeline reveals a protocol that has consistently shipped genuine technical improvements while its token price declined dramatically. The irony is stark: in 2021 the token was \$21.87 and the product was a relayer service; in 2026 the token is \$0.02 and the product is ERC-7579 modular smart accounts, cross-chain MEE supertransactions, AI agent smart sessions, and a co-authored Ethereum Foundation standard. The product improved dramatically while the price collapsed.

11 · INVESTMENT POTENTIAL & RISKS

▲ BULLISH CASE	▼ BEARISH RISKS
+ ERC-8211 co-developed with Ethereum Foundation — positions BICO at AI x blockchain frontier	- 99.9% below ATH — one of the deepest corrections in this research series
+ 70M+ transactions + 4.5M+ smart accounts — genuine on-chain traction, not whitepaper metrics	- \$25M market cap vs private competitors with larger war chests and no token volatility
+ Coinbase Ventures + YZi Labs (Binance Labs) + Stani Kulechov — elite investor roster	- ~100% supply circulating — no vesting cliff scarcity; pure demand-driven price
+ Full-stack account abstraction (gasless + cross-chain MEE + smart accounts) — broadest offering	- 7-day performance ▼48.22% shows extreme recent volatility despite 30d recovery
+ 4 independent security audits of Nexus — no significant exploits in 7 years of operation	- Developer infrastructure is B2B — slow adoption cycle; no quick retail catalyst
+ 30-day performance +78.83% from near-ATL — potential recovery underway	- Private competitors (Pimlico, ZeroDev, Stackup) compete without token price headwinds
+ 149% volume-to-market-cap ratio — significant market interest at current low prices	- ERC-8211 adoption depends on AI agent ecosystem — still nascent and unpredictable timeline
+ Fixed 1B supply hard cap — no additional BICO inflation possible	- Low market cap (\$25M) — thin order books; large holders can move price dramatically
+ Staking yields 8–15% APR — real yield from protocol fee revenue for BICO stakers	- BICO utility is indirect — staking and governance, not direct protocol fee revenue token
+ AI agent + account abstraction dual narrative — two of 2026's strongest crypto themes	- CMC rank #542 — very low visibility; limited retail awareness despite strong fundamentals

RISK FACTOR	DETAIL
Private Competition	Biconomy's most dangerous competitors — Pimlico, ZeroDev, Stackup, Alchemy — are private companies with no public token. They can raise VC funding without market scrutiny, hire aggressively, and offer developer incentives without managing token price concerns. BICO's public token is both a funding mechanism and a competitive liability.
Adoption Pace Risk	Developer infrastructure adoption is measured in quarters and years, not weeks. Even with 70M+ transactions, BICO's market cap implies the market is not pricing in material near-term adoption inflection. ERC-8211 adoption by AI agent developers could be a 12-24 month story rather than an immediate catalyst.
Token Utility Risk	BICO's staking and governance utility, while meaningful, is indirect relative to protocols where token holders earn direct fee revenue. As staking yield depends on network transaction volume, low activity periods reduce the economic case for holding BICO. The fee discount model also only benefits dApp operators, not individual token holders.
Volatility Risk	The combination of near-ATL prices, 149% volume-to-market-cap ratio, and -48% 7d performance despite +79% 30d suggests BICO is in an extremely volatile range with high speculative activity. Large price swings in either direction are likely before any stable trend establishes. Thin liquidity amplifies every move.
Narrative Risk	Biconomy's recovery thesis depends on two narratives: account abstraction becoming mainstream and AI agents driving ERC-8211 adoption. Both are credible long-term but uncertain in timing. If either narrative fades before meaningful adoption, BICO lacks a near-term fundamental catalyst to sustain price recovery.

NBZ RESEARCH VERDICT

Biconomy (\$BICO) presents one of the most striking disconnects between product quality and token price in this entire research series. In 2021 the token was worth \$21.87 and the product was a gas relay. In 2026 the token is worth \$0.02 and the product is ERC-7579 modular smart accounts, cross-chain MEE supertransactions, AI agent smart sessions, and a co-authored Ethereum Foundation execution standard — with 70M+ transactions and 4.5M+ smart accounts demonstrating real adoption. The investor roster — Coinbase Ventures, YZi Labs (Binance Labs), Stani Kulechov, Fenbushi, Mechanism Capital — is among the highest quality in this research series. The ERC-8211 AI agent standard co-development with the Ethereum Foundation is a genuine, verifiable milestone that places Biconomy at the intersection of account abstraction and autonomous AI — two of 2026's defining crypto narratives. The primary concern is the deeply competitive private-company landscape and the slow B2B developer adoption cycle. At \$25M market cap and 99.9% below ATH, BICO offers extreme asymmetric upside if ERC-8211 adoption accelerates and developer acquisition converts to measurable fee revenue growth. This is a high-risk, high-conviction infrastructure bet for investors with 12–24 month patience and genuine belief in the account abstraction thesis. **Not financial advice.**
