PROJECT OVERVIEW

PROJECT SUMMARY

FIELD	DETAIL
Project Name	DAR Open Network
Token Ticker	\$D
Blockchain	BNB Chain (primary) + Ethereum-compatible; chain-agnostic design
Founded	2019 (as Mines of Dalarnia) → Rebranded January 2025
Token Standard	ERC-20 / BEP-20
Core Mechanism	AI-powered, chain-agnostic Web3 infrastructure layer
Smart Contracts	EVM-compatible; upgradeable proxy contract system
Headquarters	Singapore (Mines of Dalarnia Ltd) + Stockholm, Sweden (ChromaWay)
Current Focus	Web3 GameFi, AI Agent Builders, Social dApps, Cross-chain Identity (DAR ID)

WHAT IS DAR OPEN NETWORK?

DAR Open Network is an AI-powered, chain-agnostic open infrastructure platform designed to revolutionize Web3 applications. Born from the ashes of Mines of Dalarnia — a play-to-earn blockchain game that launched on BNB Chain in 2022 — the project underwent a full strategic rebrand in January 2025, pivoting from a single game to a foundational infrastructure layer for the broader Web3 ecosystem. The network aims to connect AI agents, social decentralised applications, and Web3 games into one interconnected multiverse where applications share technology, assets, user experiences, and community.

THE PROBLEM IT SOLVES

The core problem DAR Open Network addresses is fragmentation in Web3 gaming and dApp development. Currently, blockchain games and applications operate in isolated silos — players cannot carry assets, identity, or progress between different platforms. DAR Open Network proposes a shared infrastructure layer where developers build on common technology and users maintain a single, portable identity (DAR ID) across all applications. The \$D token sits at the centre of all economic activity — functioning as governance currency, staking asset, in-game currency, and marketplace medium of exchange simultaneously across every application in the ecosystem.

THE EVOLUTION FROM MINES OF DALARNIA

Mines of Dalarnia began development in 2018 as a collaboration between ChromaWay (Swedish blockchain company) and Workinman Interactive (US game studio). It launched on BNB Chain in April 2022 as a play-to-earn action-adventure mining game with procedurally generated levels, NFT land ownership, and player-driven economies. The DAR token was its native currency. By January 2025, the team executed a full rebrand: DAR became \$D, the contract migrated, and the project repositioned itself as a multi-game, multi-app infrastructure network — a move from single-title GameFi to open network infrastructure.

TEAM & FOUNDERS

CORE TEAM

NAME	ROLE	KEY BACKGROUND
Or Perelman	CEO, ChromaWay AB	Co-founder of ChromaWay (2014). Appointed CEO Feb 2026, succeeding Henrik Hjelte.
Henrik Hjelte	Co-Founder & Chairman, ChromaWay	Blockchain pioneer since 2012. Co-creator of Colored Coins — the world's first Bitcoin-based digital asset.
Alex Mizrahi	Co-Founder & Chief Architect	Lead developer of Colored Coins (2012). PhD Computer Science, Technion. Co-founder of ChromaWay.
Ludvig Oberg	CTO, ChromaWay	Core technical lead for ChromaWay's blockchain infrastructure and Chromia platform.
Jason Arena	Founder & President, Workinman Interactive	Game industry veteran. Led development of Mines of Dalarnia. Workinman's client base includes major publishers.

IMPORTANT: KEY DEPARTURE

DEPARTURE NOTE
Manfred Pack — former Game Director & Project Lead of DAR Open Network — publicly announced his departure from ChromaWay and the project in early 2026.

TEAM COMPOSITION ANALYSIS

The team behind DAR Open Network is best understood as a two-entity structure: ChromaWay provides the blockchain and infrastructure backbone, while Workinman Interactive delivers the game design and player experience layer. ChromaWay's co-founding team carries genuine technical depth — Alex Mizrahi's Colored Coins work in 2012 predates Ethereum itself, making ChromaWay one of the oldest active blockchain development firms globally. However, the project lacks the high-profile, investor-friendly public figurehead that drives retail narrative in modern crypto. The departure of Manfred Pack — the most visible game-side leader — in early 2026 leaves a communications and community leadership gap that has not been publicly filled.

TECHNOLOGY & WHITEPAPER REVIEW

TECHNOLOGY STACK

COMPONENT	DESCRIPTION
Blockchain Layer	BNB Chain (primary deployment) + Ethereum-compatible; chain-agnostic by design
Consensus Mechanism	Enhanced Byzantine Fault Tolerance (eBFT) per dApp cluster + Proof-of-Stake (PoS) layer for validators;
Smart Contracts	EVM-compatible; upgradeable proxy contract system (no hard fork required for updates)
AI Integration	Decentralised AI (DeAI) capabilities; AI agent builder tools; AI-powered threat detection
Security	256-bit AES encryption + SHA-3 algorithms; AI-powered threat detection (147 breach attempts blocked in
Identity Layer	DAR ID — universal digital identity system portable across all apps in the ecosystem
Cross-app Layer	Nexus — social hub connecting all DAR ecosystem games and applications
Storage	On-chain asset ownership via NFTs; cross-world asset portability
Developer Tools	DAR Wallet (iOS, Android, Desktop); cross-chain bridge support; open SDK
Deflationary Mechanism	0.5% transaction burn fee — automated and transparent on-chain
Oracle Integration	Chainlink partnership (Jan 2026) — decentralised AI data feeds

THE INFRASTRUCTURE VISION

The DAR Open Network's core technical thesis is that the next generation of Web3 will be built on shared infrastructure rather than isolated applications. Instead of each game or dApp building its own backend, user base, and economy from scratch, DAR provides a common layer of technology, assets, and community that all applications can tap into. This is analogous to how the App Store or Google Play created shared infrastructure for mobile applications — except that in DAR's model, the infrastructure itself is decentralised and community-governed via the \$D token.

SMART CONTRACT ARCHITECTURE

A technically notable feature of DAR's smart contract design is the upgradeable proxy contract system. Traditional blockchain smart contracts are immutable once deployed — meaning bugs cannot be fixed without a disruptive hard fork. DAR's proxy architecture allows developers to push updates and bug fixes without forking the chain, reportedly reducing development downtime by 76% compared to traditional architectures. This is a meaningful developer experience advantage, particularly for a gaming platform where rapid iteration is essential.

CHROMIA BLOCKCHAIN FOUNDATION

The project is built on ChromaWay's proprietary Chromia blockchain — a relational blockchain platform that combines traditional database functionality with blockchain security. Chromia uses a relational data model (similar to SQL) rather than the key-value stores used by Ethereum and most EVM chains, making it theoretically better suited for complex game state management where relationships between entities (players, items, land, quests) must be tracked efficiently. In 2024, ChromaWay joined the Amazon Web Services Partner Network, giving Chromia access to AWS infrastructure and marketplace distribution.

USE CASES & REAL-WORLD APPLICATIONS

USE CASE OVERVIEW

USE CASE	DESCRIPTION	STATUS / EXAMPLE
Web3 Gaming Infrastructure	Shared backend for multiple blockchain games with cross-chain interoperability	Mines of Dalarnia, Dalarnia Legends, Chain of Alliance, Chain of Valor
Play-to-Earn Economy	Players earn \$D through gameplay, mining, tournaments	250,000 \$D completed Chainlink Tournaments Tournament prize pool (Sept 2025)
AI Agent Builders	Developer tools to build AI-powered decentralised applications	Core 2026 roadmap expansion
DAR Citizenship	Paid premium membership granting exclusive gaming rewards and benefits	Launched in late August 2025
Quest System	On-chain quest and achievement tracking to incentivise consistent play	Set in Dalarnia Legends (Aug 2025)
DAR ID	Universal digital identity portable across all ecosystem applications	2026 roadmap
NFT Land Ownership	Players own, rent, and trade in-game land plots as on-chain NFTs	NFTs of Dalarnia
Cross-chain Asset Portability	NFTs and tokens usable across different virtual worlds	Nexus ecosystem development
DAO Governance	Token holders vote on land economy, game rules, and ecosystem future	Launched in late August 2025
Social dApps	Decentralised social experiences built on the shared infrastructure	2026

THE MULTIVERSE THESIS

DAR Open Network’s use case thesis rests on the ‘multiverse’ concept: a network of interconnected games and applications where a player’s identity, assets, and progress are genuinely portable. A sword earned in Mines of Dalarnia could theoretically be used in Dalarnia Legends; a player’s DAR ID score earned across multiple games could unlock exclusive benefits in the Nexus social hub. This is the promise that distinguishes DAR from a simple game publisher — it is positioning itself as the platform layer for an entire ecosystem rather than a single title.

AI INTEGRATION AMBITIONS

The rebrand to DAR Open Network was explicitly tied to an AI integration narrative. The network positions AI agent builders as a core product — allowing developers to create autonomous AI-driven characters, economies, and experiences within the ecosystem. The January 2026 Chainlink partnership to integrate decentralised AI data feeds represents the most concrete step toward this vision. However, as of mid-2026, the AI layer remains largely aspirational — the tangible shipped products are primarily gaming-related (DAR Citizenship, Quest System, tournaments) rather than AI-native infrastructure.

COMMUNITY

COMMUNITY METRICS

METRIC	DATA
Primary Platform	BNB Chain / PancakeSwap ecosystem
Governance	On-chain DAO via PancakeSwap governance votes
Gaming Community	Active playerbase across Mines of Dalarnia, Dalarnia Legends, Chain of Alliance
Regional Strength	Indonesia is the largest and most active regional market (listed on Indodax)
DAR Citizenship	Paid premium membership — beta launched August 2025
Quest System	Beta live — gamified engagement with on-chain reward tracking
Grand Masters Tournament	Global esports event, 250,000 \$D prize pool — September 2025
Social Channels	Active Twitter/X, Telegram, Discord community
Developer Ecosystem	DAR Wallet, cross-chain bridge, open SDK, AWS partnership
Staking Yield	12.76% APY on Binance (active until June 19, 2026 delisting)

COMMUNITY STRENGTHS & CHALLENGES

DAR Open Network's strongest community asset is its gaming playerbase — a real, engaged user group that has been active since the Mines of Dalarnia days. Unlike many DeFi or infrastructure tokens whose communities are primarily speculative, DAR has players who interact with the product daily. The Indonesian market has emerged as the protocol's most active region, supported by the Indodax listing and strong local crypto adoption. The Grand Masters Tournament in September 2025, with its 250,000 \$D prize pool, demonstrated the team's willingness to deploy treasury resources to incentivise competitive engagement.

However, the Binance Monitoring Tag added in January 2026 — and the subsequent confirmed delisting on June 19, 2026 — represents a severe community confidence blow. Binance was the project's highest-volume exchange and its most visible credibility signal. Losing that listing forces the community onto lower-liquidity venues and significantly narrows the project's reach to new retail participants.

INVESTORS & PARTNERSHIPS

FUNDING ROUNDS

ROUND	DATE	AMOUNT	VALUATION	LEAD INVESTORS
Seed Round	2021	\$2.7M	N/A	Animoca Brands, Binance Labs, Crypto.com Capital, ASYMM, IMPA,
IDO (PancakeSwap)	Nov 2021	Public Sale	~\$0.10 IDO price	Public — 1.49% of supply

INVESTOR ROSTER

INVESTOR	ROUND	TYPE / NOTE
Animoca Brands	Lead Seed	Tier 1 Web3 / Gaming — world's largest blockchain gaming investor
Binance Labs	Seed	Venture arm of Binance — Tier 1 crypto exchange ecosystem fund
Crypto.com Capital	Seed	Venture arm of Crypto.com — major CEX ecosystem fund
ASYMM Ventures	Seed	Crypto-native venture fund
IMPA Ventures	Seed	Web3 / gaming focused venture
Bitscale Capital	Seed	Crypto venture fund
Athena Ventures	Seed	Blockchain gaming investor
NGC Ventures	Seed	Asia-focused blockchain venture fund
ChromaWay	Founding	Technical co-creator — blockchain infrastructure backbone

WHAT THE FUNDING SIGNALS

DAR Open Network raised \$2.7 million in its seed round — a modest figure by 2021 bull market standards, but notable for the quality of its backers. Animoca Brands and Binance Labs as co-leads represent two of the most strategically valuable investors in the GameFi space: Animoca for its portfolio network across hundreds of Web3 gaming projects, and Binance Labs for the exchange listing access and visibility it provides. Crypto.com Capital's participation rounded out a CEX-aligned backing structure that gave DAR strong exchange relationships from launch.

However, it is important to note that this funding was raised in 2021 — at the peak of the play-to-earn boom. The project has not announced any subsequent institutional funding rounds since, and there is no evidence of a Series A or follow-on raise aligned with the January 2025 rebrand. This is a material weakness: the rebrand to an AI-powered infrastructure network was executed without publicly disclosed fresh institutional capital to underwrite the expanded vision.

KEY PARTNERSHIPS

PARTNER	DATE	DESCRIPTION
Chainlink	Jan 2026	Decentralised AI data feed integration — oracle infrastructure for DeAI capabilities
Amazon Web Services	2024	ChromaWay joined AWS Partner Network — Chromia available on AWS Marketplace

PARTNER	DATE	DESCRIPTION
PancakeSwap	2021–present	Primary DEX for \$D trading and governance vote execution
Indodax	2025	Indonesian CEX listing — largest regional market for \$D
ChromaWay / Chromia	Founding	Core blockchain infrastructure — relational blockchain platform
Workinman Interactive	Founding	Game development partner — Mines of Dalarnia and ecosystem titles

TOKENOMICS

TOKEN BASICS

PARAMETER	DETAIL
Token Symbol	\$D
Token Standard	ERC-20 / BEP-20 (migrated from DAR to D in January 2025)
Total / Max Supply	800,000,000 D (800 Million — fixed)
Circulating Supply	~743.51M D (~92.9% of total as of June 2026)
Fully Diluted Market Cap	~\$4.58M at current price (~\$0.0057)
Deflationary Mechanism	0.5% burn on every transaction — automated and transparent
Primary DEX	PancakeSwap (BNB Chain)
Token Utility	Governance, staking, in-game currency, marketplace currency, AI feature access
Staking Yield	12.76% APY (Binance — active until June 19, 2026 delisting)

TOKEN ALLOCATION BREAKDOWN

ALLOCATION	TOTAL %	TOKENS	NOTES
Play to Earn	20.00%	160,000,000	Player rewards across all ecosystem games
Foundation	19.99%	~159,920,000	Foundation treasury for operations and development
Team	15.00%	120,000,000	Core team allocation — subject to vesting
Private Sale	14.99%	~119,920,000	Early institutional and private investors
Ecosystem (Unallocated)	6.99%	~55,920,000	Reserve for future ecosystem initiatives
Advisors	6.99%	~55,920,000	Advisor compensation and strategic partners
Marketing	5.99%	~47,920,000	Marketing, growth, and community campaigns
Liquidity	5.49%	~43,920,000	Exchange liquidity provision
Launchpool	2.99%	~23,920,000	Launchpool distribution rewards
Public Sale (IDO)	1.49%	~11,920,000	IDO on PancakeSwap — November 2021

SUPPLY STRUCTURE ANALYSIS

With approximately 92.9% of the total supply already in circulation, DAR Open Network’s tokenomics present a very different risk profile from projects with large locked tranches pending release. There is minimal remaining vesting overhang — most tokens have already entered the market. This is a double-edged structure: it removes the threat of large scheduled unlock events crashing the price, but it also means there is limited 'new supply absorption' mechanism. The token's scarcity thesis must rely almost entirely on the 0.5% transaction burn and genuine organic demand growth.

The largest single allocation is Play to Earn at 20% — distributed to real players who engage with the ecosystem. This is the healthiest form of token distribution: rewards going to actual product users rather than speculators. The Foundation's 19.99% gives the development team operational runway, while the Team's 15% aligns incentives with long-term protocol success. The Private Sale allocation at 14.99% represents the most significant potential sell pressure, as early investors who entered at low prices may look to exit during any price appreciation.

MARKET OVERVIEW

MARKET DATA (June 10, 2026)

METRIC	DATA
Token Symbol	\$D
Current Price	~\$0.0057 (June 10, 2026 — near all-time low)
24h Low / High	\$0.005048 / \$0.005707
CMC Rank	#1,291
Market Cap	~\$4.26M
Unlocked Market Cap	~\$4.38M
Fully Diluted Market Cap	~\$4.58M
24h Volume	\$5.49M
Max Supply	800,000,000 D
Circulating Supply	743,510,000 D (~92.9%)
All-Time High	\$4.906 (as DAR — March 2024 era)
All-Time Low	\$0.005048 (June 2026 — current period)
% Below ATH	~99.9% below all-time high
Total Funding Raised	\$2.7M (Seed, 2021)

PRICE HISTORY

DAR Open Network's price history is defined by one extraordinary peak and a prolonged, steep decline. The all-time high of \$4.906 was reached during the 2024 bull market — a period when play-to-earn gaming tokens were among the best-performing assets in crypto. At that peak, the project commanded a fully diluted valuation of nearly \$4 billion. From that high, the token entered a sustained downtrend that has continued through the 2025 rebrand and into 2026, with the current price of approximately \$0.0057 representing a staggering 99.9% decline from the all-time high.

The January 2025 rebrand from Mines of Dalarnia to DAR Open Network failed to reverse the price trend. The price briefly recovered to approximately \$0.24 in late 2024 before resuming its decline. A notable surge of 92.48% occurred on April 2, 2026, followed by continued deterioration. The Binance Monitoring Tag in January 2026 and the confirmed delisting on June 19, 2026 have accelerated selling pressure, with the token now trading near its all-time low.

FUNDAMENTAL VALUATION CONTEXT

At a current market cap of approximately \$4.26M, DAR Open Network is priced as a micro-cap asset — one of the smallest valuations for a project with this level of institutional backing, exchange history, and active product suite. The fully diluted valuation of \$4.58M is nearly identical to the market cap, reflecting the near-fully-circulating supply. For context, the project's seed investors who participated at the 2021 IDO price of approximately \$0.10 are currently sitting on a 94%+ loss from that entry point. The 24h trading volume of

\$5.49M significantly exceeds the market cap — an unusual ratio suggesting high speculative turnover relative to the asset's size, often associated with distressed or exit-driven selling.

COMPETITORS & MARKET POSITION

COMPETITOR COMPARISON

PROJECT	TYPE	CHAIN	vs DAR OPEN NETWORK
Axie Infinity (AXS)	GameFi / P2E	Own blockchain (Ronin)	Pioneer P2E but crashed badly; working on V3 comeback
The Sandbox (SAND)	GameFi / Metaverse	Ethereum / Polygon	Major brand partnerships; more metaverse than GameFi infra
Gala Games (GALA)	GameFi Platform	Own chain (GalaChain)	Multi-game publisher model — most similar to DAR's multi-title
Immutable (IMX)	GameFi Infrastructure	Immutable zkEVM (ETH L2)	Stronger infrastructure play; Gods Unchained, Illuvium — better
Ronin / Sky Mavis	GameFi Infrastructure	Ronin (own chain)	Axie ecosystem; battle-tested but Axie-dependent
Beam (BEAM)	GameFi Infrastructure	Beam Chain (Avalanche subnet)	Metacircle backed; strong developer tools and multi-game focus
DAR Open Network (\$D)	GameFi + AI Infrastructure	BNB Chain / Chain-agnostic	Oldest GameFi team; AI pivot; losing Binance listing is critical

COMPETITIVE POSITIONING

DAR Open Network competes in the crowded GameFi infrastructure segment, where it faces well-funded, better-known competitors on multiple fronts. Its most direct comparable is Gala Games — both operate multi-game publisher models with a native token at the centre of their economies. However, Gala has significantly more games in active development, a higher profile, and greater institutional support. Immutable represents the more technically sophisticated infrastructure competitor: its zkEVM L2 specifically built for gaming offers stronger scalability guarantees than DAR's BNB Chain deployment.

DAR's genuine differentiators are its longevity — ChromaWay has been building blockchain infrastructure since 2014, predating most competitors — and its AI integration roadmap, which is more explicitly developed than most GameFi platforms. The Chainlink oracle partnership gives the AI narrative some technical credibility. However, DAR's competitive position has been materially weakened by the Binance delisting, which removes the token's most important liquidity and visibility advantage. Competitors with active Binance listings will capture the attention and capital that DAR can no longer access through that channel.

RECENT NEWS & UPDATES (2024–2026)

NEWS TIMELINE

DATE	EVENT
Jun 2026	Binance confirms delisting of \$D on June 19, 2026 — alongside COS, HIGH, and MBOX. Immediate 22%+ price drop on announcement.
Jun 2026	Token trading near all-time lows (~\$0.005–\$0.007) as Binance delisting creates sustained sell pressure and liquidity exit.
Apr 2026	\$D surges 92.48% on April 2, 2026 — brief speculative rally quickly reversed.
Feb 2026	Or Perelman appointed CEO of ChromaWay AB, succeeding co-founder Henrik Hjelte who transitions to Chairman role.
Jan 2026	Manfred Pack publicly announces departure from ChromaWay and DAR Open Network after 4+ years. Launches new AI gaming platform.
Jan 2026	Binance places Monitoring Tag on \$D alongside ACA, DATA, and FLOW — citing higher volatility and risk. Users required to provide additional information.
Jan 2026	Chainlink partnership announced — decentralised AI data feed integration to boost DeAI capabilities within the network.
Sep 2025	Grand Masters Tournament launches for Dalarnia Legends — global esports event with 250,000 \$D prize pool.
Aug 2025	DAR Citizenship (paid premium gaming membership) launches in beta, alongside a beta Quest System — initially limited to DACH region.
Jan 2025	Full rebrand from Mines of Dalarnia (DAR) to DAR Open Network (\$D). Token contract migrates. Strategic pivot from single game to open network.
2024	ChromaWay joins Amazon Web Services Partner Network — Chromia available on AWS Marketplace.
Mar 2024	\$D (as DAR) reaches all-time high of ~\$4.906 during the bull market GameFi rally.
Nov 2021	DAR tokenIDO on PancakeSwap at ~\$0.10. Mines of Dalarnia launches publicly on BNB Chain.
2021	\$2.7M seed round closed — backed by Animoca Brands, Binance Labs, Crypto.com Capital, and others.

ANALYSIS OF KEY EVENTS

The most consequential event in DAR Open Network's recent history is the Binance delisting confirmed for June 19, 2026. Binance accounted for the majority of \$D's trading volume and provided the token with its most important credibility signal. A Binance listing is a prerequisite for many retail investors to even consider an asset — losing it does not just reduce liquidity, it functionally removes DAR from the consideration set of the most active trading demographic in crypto. The delisting follows the January 2026 Monitoring Tag, which itself reflected Binance's assessment that the project failed to meet its standards for team commitment, development activity, trading volume, and network security.

The departure of Manfred Pack in January 2026 compounded this: DAR lost its most visible public-facing leader and its most credible gaming-industry communicator at the same moment its exchange relationship was deteriorating. The Chainlink partnership and Or Perelman's appointment as ChromaWay CEO are positive structural signals, but they have not been sufficient to arrest the token's price decline or restore exchange confidence.

INVESTMENT POTENTIAL & RISKS

BULLISH CASE vs BEARISH RISKS

BULLISH CASE ▲	BEARISH RISKS ▼
▲ 99.9% below ATH — extreme discount if AI/GameFi narrative returns	▼ Binance delisting June 19, 2026 — critical liquidity and credibility loss
▲ 92.9% supply already circulating — near-zero vesting overhang or unlock risk	▼ Price at all-time low (~\$0.005) with no clear technical support level
▲ 0.5% transaction burn — deflationary mechanism reduces supply over time	▼ Manfred Pack's departure — most visible game-side leader has exited
▲ Chainlink oracle partnership (Jan 2026) adds credibility to AI integration roadmap	▼ No new institutional funding round since 2021 seed — 5 years without fresh capital
▲ ChromaWay founded 2014 — one of the oldest, most experienced blockchain dev teams	▼ Low codebase activity — limited public GitHub commits reported as of mid-2025
▲ Animoca Brands + Binance Labs backing — Tier 1 GameFi investor pedigree	▼ Market cap (\$4.26M) smaller than 24h volume (\$5.49M) — distressed sell signal
▲ Active product suite: DAR Citizenship, Quest System, tournaments, multiple games	▼ Heavy GameFi sector correlation — 38% price correlation with overall GameFi
▲ Indonesian market adoption strong — Indodax listing provides regional liquidity	▼ AI pivot largely aspirational — shipped products are gaming, not AI-native
▲ AWS Partner Network membership — institutional infrastructure credibility	▼ Regulatory uncertainty — SEC stance on gaming utility tokens remains unresolved
▲ AI narrative pivot positions project in one of 2025–2026's hottest crypto themes	▼ Competitors (Immutable, Gala, Beam) better funded and more actively developed

DETAILED RISK ASSESSMENT

RISK FACTOR	SEVERITY	DETAIL
Exchange Delisting Risk	CRITICAL	Binance delisting on June 19, 2026 removes the project's primary liquidity venue. Post-delisting, liquidity could evaporate, leading to a sharp price drop and loss of market access.
Leadership Risk	HIGH	Manfred Pack's departure leaves a public-facing leadership gap. Or Perelman's CEO appointment is unconfirmed, creating uncertainty about the project's strategic direction and execution.
Development Activity Risk	HIGH	Limited publicly visible codebase updates as of mid-2025 raises questions about execution pace and the viability of the AI/GameFi integration.
Liquidity Risk	HIGH	A market cap of ~\$4.26M with \$5.49M daily volume indicates thin order books and high turnover, making the price highly volatile and susceptible to manipulation.
Funding Risk	MEDIUM	No announced Series A or follow-on round since 2021. Executing an AI infrastructure rebrand without fresh capital is a significant challenge.
Competition Risk	MEDIUM	Immutable, Gala Games, and Beam are all better capitalised and more actively marketed. DAR's unique value proposition needs to be clearly articulated and proven.
AI Narrative Risk	MEDIUM	The AI pivot is largely a rebranding exercise at this stage. If AI x GameFi narrative fails to materialize, the project could be perceived as a mere marketing stunt.
Regulatory Risk	LOW-MEDIUM	Gaming utility tokens face evolving SEC scrutiny. Indonesia approval is positive but US and EU regulatory environments remain uncertain and could impact global adoption.

NBZ RESEARCH VERDICT

DAR Open Network occupies a genuinely interesting position: a project with a decade-long blockchain development pedigree, Tier 1 GameFi investor backing, and an active multi-game ecosystem — priced at a micro-cap \$4.26M market cap, 99.9% below its all-time high. The ChromaWay team's technical heritage is real, and the AI infrastructure pivot is directionally aligned with where Web3 is heading. However, the Binance delisting on June 19, 2026 is not just a liquidity event — it is a structural credibility blow that will take sustained product delivery and community rebuilding to recover from. The departure of Manfred Pack, the absence of fresh institutional funding since 2021, and limited public development activity compound the concern. At current prices, \$D is a pure high-risk, high-patience speculative position: the upside requires both an AI/GameFi narrative revival AND successful execution of an ambitious infrastructure roadmap by a team that has lost its most public leader. Not financial advice.
