

OPINION

\$OPN · Institutional Research Report

An AI-powered, on-chain prediction market turning global macroeconomic events into tradeable probability contracts — evaluated across technology, tokenomics, funding, market performance, ecosystem traction, and forward-looking risk.

TICKER	SECTOR	CHAIN	REPORT DATE
OPN	Prediction Markets / Macro-Trading	BNB Chain (built on Monad testnet)	August 2026

■ SECTION 01

Project Overview

Opinion (OPN) is an on-chain prediction market platform, built by Opinion Labs, that lets users trade directly on the outcomes of real-world macroeconomic events — interest-rate decisions, inflation prints, employment data, and similar indicators — rather than relying on indirect crypto proxies like Bitcoin or gold. The platform, branded Opinion.Trade, combines an AI oracle for data interpretation and market resolution with an on-chain central limit order book and DeFi-composable smart contracts.

Development began on the Monad testnet before the team moved its mainnet launch exclusively to BNB Chain. The OPN token generation event took place on March 2, 2026, with exchange listings — including a Binance Launchpool placement — following on March 5, 2026. The core pitch is turning abstract economic beliefs ("will inflation come in hot?") into standardized, liquid, tradeable contracts, using a liquidity-pool market-making model so users aren't forced to wait for a matching counterparty.

\$0.0611 PRICE (SNAPSHOT)	\$11.05M MARKET CAP	\$61.31M FULLY DILUTED VALUATION	#838 MARKET RANK	+19.1% 24H MOVE (BINANCE)
-------------------------------------	-------------------------------	--	----------------------------	-------------------------------------

Snapshot

Metric	Value
Token Ticker	OPN
Category	AI-Powered Prediction Markets / Macro Trading
Circulating Supply	180.26M OPN
Total Supply / Max Supply	1.00B OPN
24h Trading Volume	\$19.61M
All-Time High	\$0.5250
All-Time Low	\$0.04478
Token Generation Event (TGE)	March 2, 2026
Website	opinion.foundation
Whitepaper / Docs	docs.opinion.trade

OPN is trading roughly 88% below its March 2026 all-time high and only modestly above its all-time low — but the snapshot in this report also captures a sharp single-day rally (+19% across major venues), underscoring how volatile this small-cap token remains nearly six months post-launch.

■ SECTION 02

Problem & Solution

The Problem

Traders who want exposure to macroeconomic views — will the Fed cut rates, will inflation surprise to the upside — have historically had to use imperfect proxies like gold, bonds, or crypto majors, all of which are driven by many factors beyond the specific macro question at hand. Meanwhile, most prediction-market infrastructure either relies on order-book matching (which can leave traders waiting for a counterparty) or centralized, opaque resolution processes that undermine trust in settlement.

The Solution

- **Direct macro-event contracts** — standardized, tradeable markets on inflation, rate decisions, employment data, and similar indicators, letting traders express a macro view without a proxy asset.
- **AI oracle resolution** — an AI-driven system analyzes source data to help generate and settle market outcomes, intended to reduce reliance on manual or centralized resolution.
- **Liquidity pool market-making** — shared liquidity pools let users enter and exit positions without waiting for a matched counterparty, improving pricing stability versus pure order-book models.
- **On-chain order book + DeFi composability** — trades settle transparently on BNB Chain, with contracts designed to plug into the broader DeFi ecosystem.
- **Governance** — OPN holders vote on platform parameters, feature changes, and protocol direction rather than decisions being made unilaterally by the team.

■ SECTION 03

Technology & Architecture

Opinion's stack pairs a decentralized oracle layer with on-chain trading infrastructure. AI oracles ingest macroeconomic data releases and other real-world signals, translate them into standardized market outcomes, and feed settlement data to the trading contracts — an approach the team positions as faster and more scalable than manual or committee-based resolution used by some earlier prediction market designs.

Trading itself runs through an on-chain central limit order book layered on top of liquidity pools, combining the price transparency of an order book with the continuous liquidity of an AMM-style pool. The platform was originally built and tested on the Monad testnet — a high-throughput EVM-compatible chain — before the team elected to launch its production mainnet on BNB Chain, likely reflecting BNB Chain's larger existing user base and exchange integration (Binance Launchpool, Binance Wallet, Binance Alpha).

Core Components

Component	Function
AI Oracle	Analyzes macro data and real-world signals to generate and settle market outcomes
On-Chain Order Book	Transparent, on-chain trade matching and price discovery
Liquidity Pools	Shared pools enabling smooth entry/exit without waiting for a direct counterparty
Governance Module	OPN-token voting on platform parameters and protocol changes

As with any AI-driven oracle, resolution quality depends heavily on data-source integrity and dispute handling for edge cases (delayed data, revised statistics, contested outcomes) — details worth verifying directly against docs.opinion.trade before treating settlement as fully trust-minimized.

■ SECTION 04

Tokenomics & Allocation

OPN has a fixed total/max supply of 1,000,000,000 tokens. At TGE, circulating supply was roughly 19.85% of total supply, drawn primarily from an immediate partial airdrop unlock and fully-unlocked liquidity allocation. As of this report's data pull, circulating supply stood at 180.26M OPN against an unlocked market cap of \$22.62M and a fully diluted valuation of \$61.31M — meaning roughly 82% of max supply remains locked or vesting.

Allocation Breakdown

Allocation Category	% of Supply
Airdrop	23.50%
Investor	23.00%
Team & Advisor	19.50%
Foundation	12.00%
Ecosystem	11.10%
Marketing	8.90%
Liquidity	2.00%

Vesting Schedule

Category	Unlock Terms
Investors & Team (42.5% combined)	0% at TGE; 12-month cliff, then 24-month linear vesting
Airdrop	3.5% unlocked immediately at TGE; remainder on a 7-month linear vesting schedule
Foundation & Marketing	Vesting over a 36-month cycle to fund ongoing ecosystem growth
Liquidity	Fully unlocked at TGE to support trading depth from day one

Similar to several other 2026 launches, Opinion gated its largest insider categories (Investors + Team = 42.5% of supply) behind a full 12-month cliff with no unlock at TGE — a conservative structure that concentrated early sell pressure in the airdrop and liquidity categories instead. Investors should treat March 2027 (the 12-month cliff date) as a key calendar risk once insider vesting begins.

■ SECTION 05

Funding & Investors

Opinion has raised approximately \$25.00M across multiple rounds. A Seed round in March 2025, led by YZi Labs (formerly Binance Labs) at roughly a \$50M valuation, was followed by a larger \$20M pre-Series A in early 2026 led by Jump Crypto, which pushed the project's valuation to approximately \$200M. Investors across both rounds include Amber Group, Animoca Brands, Manifold Trading, Hack VC, and Primitive Ventures.

Investor Tiers

Tier	Notable Backers	Type
Tier 1	YZi Labs (Lead, formerly Binance Labs)	Incubator
Tier 2	Amber Group, Hack VC, Jump Crypto	Venture
Tier 3	Animoca Brands, Primitive Ventures, echo	Venture
Tier 4	Manifold, Decasonic, LIF	Venture

The jump from a ~\$50M seed valuation to a ~\$200M pre-Series A valuation within roughly a year reflects strong investor demand into Opinion's growth phase, and the involvement of Binance's own incubator arm (YZi Labs) as lead investor is consistent with the project's subsequent fast-tracked Binance Launchpool placement and Alpha listing.

SECTION 06

Team

Opinion Labs' leadership includes Forrest Liu as Founder and CEO and a co-founder known publicly as "KJ." Liu maintains a public presence including an X/Twitter account; KJ's public profile uses a pseudonymous avatar and handle rather than a disclosed full identity.

Name	Role
Forrest Liu	Founder & CEO
KJ	Co-Founder

A partially doxxed leadership team (a named, public-facing CEO alongside a pseudonymous co-founder) is a common structure among well-funded 2026 crypto projects and sits in the middle of the transparency spectrum — meaningfully more accountable than a fully anonymous team, though short of complete public disclosure.

SECTION 07

Market Performance & Liquidity

OPN's 24-hour trading range at the time of this report spanned \$0.05117 to \$0.06203, with the token up sharply (+18–20%) across nearly every major venue in the same session — a notable single-day move for a token that has otherwise drifted down significantly from its March 2026 all-time high of \$0.5250. OPN currently trades only modestly above its all-time low of \$0.04478, reflecting a sustained multi-month downtrend interrupted by this report's snapshot rally.

Exchange Liquidity (24h volume by venue)

Exchange	Pair	24h Volume	Price	24h %
Binance TR	OPN/TRY	\$4.21M	\$0.06177	+20.3%
Binance	OPN/USDT	\$4.10M	\$0.06114	+19.1%
P2B	OPN/USDT	\$920.50K	\$0.06124	+19.3%
WhiteBIT	OPN/USDT	\$629.64K	\$0.06094	+18.2%

Exchange	Pair	24h Volume	Price	24h %
Bybit	OPN/USDT	\$512.25K	\$0.06134	+19.5%
Hotcoin	OPN/USDT	\$401.86K	\$0.06134	+19.7%
Bittrue	OPN/USDT	\$369.13K	\$0.06144	+19.4%
BingX	OPN/USDT	\$243.00K	\$0.06144	+19.9%
CoinW	OPN/USDT	\$229.85K	\$0.06141	+19.9%

Binance venues (main spot plus Binance TR) together represent the clear majority of visible liquidity, underscoring how central the Binance Launchpool listing remains to OPN's trading activity roughly five months after launch. The uniformity of the +18–20% move across every listed venue suggests a broad market-wide catalyst rather than isolated exchange-specific activity, though the specific driver was not confirmed in this report's source material.

■ SECTION 08

Ecosystem & Competitive Landscape

Ecosystem Traction

- Opinion launched its trading platform in late 2025, ahead of its OPN TGE, and the team has stated the platform generated millions of dollars in fees prior to token launch.
- Binance integration runs deep: a 72nd Binance Launchpool placement, Binance Alpha airdrop distribution, and multi-pair spot listings (OPN/USDT, OPN/USDC, OPN/BNB, OPN/TRX, and others) gave OPN unusually broad Binance-ecosystem exposure at launch.
- Community farming during the Launchpool period (locking BNB, USDC, U, and USD1) distributed 2% of total supply directly to the Binance user base ahead of listing.

Competitive Landscape

Opinion competes in the fast-growing on-chain prediction market category alongside platforms such as Polymarket, Kalshi (in its crypto-adjacent form), and newer entrants like Rain Protocol and Predict.fun, several of which have themselves drawn significant capital and, in some cases, scrutiny — one prominent on-chain investigator flagged suspicious activity at a competing prediction-markets project in 2026, underscoring that trust and settlement integrity remain the category's central differentiator. Opinion's specific niche — macroeconomic data rather than political or sports events — is narrower than generalist competitors, which could support a more defensible expert audience but also caps its addressable market relative to broader-scope prediction platforms.

■ SECTION 09

Roadmap & Outlook

Per the project's public roadmap disclosed around its tokenomics announcement, Opinion targeted its Q1 2026 TGE as the starting point for a broader push into ecosystem growth and decentralized governance during Q2 2026 and beyond. As of this report, OPN is roughly five months past TGE, placing it in the post-launch phase where governance activation and expanded market types become the key milestones to track.

- Watch for expansion of tradeable market categories beyond core macro indicators (rates, inflation, employment) into adjacent event types, which would broaden the platform's addressable trading volume.

- Watch for the March 2027 insider cliff date, when the 42.5% combined Investor/Team allocation begins its 24-month linear unlock — a key medium-term supply event.
- Watch for governance activation details and voting participation levels, which will indicate whether OPN's governance utility is being meaningfully used rather than remaining nominal.

■ SECTION 10

Bullish Case, Bearish Case & Risk Factors

▲ BULLISH CASE	▼ BEARISH CASE
+ Differentiated niche — direct macroeconomic-event trading is a narrower, more defensible focus than generalist prediction markets, appealing to a specific macro-trading audience. + Deep Binance ecosystem integration (Launchpool, Alpha, multi-pair spot listings) gave OPN unusually strong day-one liquidity and continues to anchor the majority of trading volume. + Credible investor progression from a ~\$50M seed to a ~\$200M pre-Series A within about a year, led by YZi Labs and Jump Crypto respectively. + Conservative insider vesting (0% Team/Investor unlock at TGE, 12-month cliff) reduces near-term sell pressure from the largest allocation categories. + Platform reportedly generated meaningful fee revenue prior to TGE, suggesting some organic product-market fit ahead of the token launch.	– Token is down roughly 88% from its March 2026 all-time high, and the featured +19% rally in this report's snapshot should be read against a longer multi-month downtrend, not in isolation. – Prediction markets as a category have drawn regulatory attention and, in at least one high-profile 2026 case, on-chain scrutiny over suspicious activity at a competing platform — a reputational risk for the category broadly. – AI oracle resolution introduces a trust dependency on data-source integrity and dispute handling that is difficult for outside observers to independently verify. – 42.5% combined Team/Investor allocation remains a significant medium-term overhang once the 12-month cliff lapses in March 2027. – Narrow macro-only focus, while differentiated, also caps total addressable trading volume relative to generalist prediction-market competitors covering politics, sports, and pop culture.

Key Risk Factors

Risk Factor	Severity	Description
Post-ATH Drawdown	High	OPN trades roughly 88% below its March 2026 all-time high, reflecting sustained weak demand since launch.
Token Overhang	Medium	42.5% combined Team/Investor allocation unlocks starting March 2027, then vests over 24 months.
Oracle / Resolution Trust	Medium	AI-driven market resolution depends on data-source integrity and dispute processes not independently verifiable from public sources.
Regulatory Scrutiny	Medium	Prediction markets broadly face evolving regulatory treatment and category-wide reputational risk from bad actors at competing platforms.
Niche Market Ceiling	Medium	Macro-only focus is differentiated but structurally caps addressable trading volume versus generalist prediction platforms.

Risk Factor	Severity	Description
Team Transparency	Low	Leadership is partially disclosed (named CEO, pseudonymous co-founder) — moderate but not complete transparency.
Macro / Crypto Beta	High	As a sub-\$50M market cap altcoin, OPN is highly correlated with broader crypto market cycles and risk sentiment.

■ SECTION 11

Investment Potential and Risks

Opinion occupies a genuinely differentiated corner of the prediction-market category — direct, standardized trading on macroeconomic outcomes — backed by credible investors (YZi Labs, Jump Crypto, Amber Group, Animoca Brands) and unusually deep Binance ecosystem integration from day one. Its conservative insider vesting schedule is also a genuine structural positive relative to peers with immediate unlock exposure.

That said, the token's price action since TGE has been weak, with an ~88% drawdown from all-time highs that this report's snapshot rally does not erase. The project's core value proposition — trustworthy AI-driven resolution of real-world macro events — is difficult to independently verify, and the broader prediction-market category has drawn regulatory and reputational scrutiny in 2026 that could affect sentiment toward all platforms in the space, Opinion included.

NBZ RESEARCH VERDICT

Rating: SPECULATIVE / HIGH RISK — Watch List

Opinion combines a differentiated macro-trading niche, credible institutional backing, and a conservative token-release structure with a materially weak post-launch price trajectory and unresolved questions about oracle trust and category-wide regulatory risk. The featured single-day rally in this report is notable but should not be read as a trend reversal absent confirming follow-through over subsequent weeks. NBZ Research places OPN on a watch list, best suited to investors who specifically want exposure to the macro-prediction-market niche and can tolerate continued high volatility, rather than as a core portfolio holding at current levels.

This report reflects publicly available information as of the stated date and is not financial advice. DYOR. Token unlock schedules and roadmaps are subject to change — verify against docs.opinion.trade.
